

Use-Case Flow Specification: Student Project Portfolio & Showcase App

Student: Aarav Yuval B G | SRN: PES1UG24AM004 | Dept. of CSE (AI&ML;), PES University

Use Case ID & Name: UC-01: Create & Submit Project Showcase Profile

1. Scope & Overview

This use case describes how a student team enters project details, attaches multimedia artifacts (abstract, demo video links, and verified GitHub repository URL), triggers automated link validation, and submits the finalized showcase profile to the public expo catalog.

2. Actors

- **Student Team** (Primary Actor)
- **External Repository Validator** (Secondary System Actor)
- **Media Streaming & Storage Service** (System Actor)

3. Preconditions & Postconditions

Preconditions: The student team lead is registered, authenticated with institutional credentials, and the expo project submission window is active.

Postconditions: The project showcase profile is validated, assigned a unique Expo Showcase ID, stored in the database, and published to the public showcase catalog.

4. Main Success Scenario

1. Student team navigates to the expo portal and selects "Create New Showcase Profile".
2. System displays the multi-part project submission form requiring title, abstract summary, technology tags, demo video URL, and GitHub repository URL.
3. Student team enters project metadata, writes the abstract summary, and provides links to multimedia artifacts.
4. System executes «include» UC-02: Validate Repository & Media Links to verify the GitHub repository link format, public accessibility, and video embed compatibility.
5. System validates inputs successfully and renders a real-time showcase preview card for team review.
6. Student team reviews the rendered showcase card and clicks "Submit Showcase Profile".
7. System generates a unique Expo Showcase ID, persists the profile, indexes it in the public expo catalog, and displays a submission confirmation receipt. Use case ends successfully.

5. Alternate Flow

4a. Repository Link Validation Failed

- 4a1.** System detects that the provided GitHub URL is unreachable, private, or contains invalid syntax.
- 4a2.** System displays an error notification highlighting the repository field and prompts the student team to provide a valid, publicly accessible repository link.
- 4a3.** If validation fails again after 2 retry attempts, the system saves the entered submission as an unlisted draft and notifies the team that publication requires a validated repository link.
